Introduction

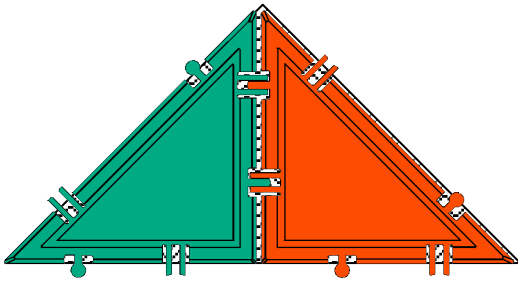

You are probably very eager to start building 3D shapes with Geometiles. These exercises will give you a quick introduction.

You will be working with a set of 14 tiles: 2 of every type of Geometiles tile. Cover the shaded figures with **2 tiles** precisely. The 2 tiles you use may be the same or different from each other.

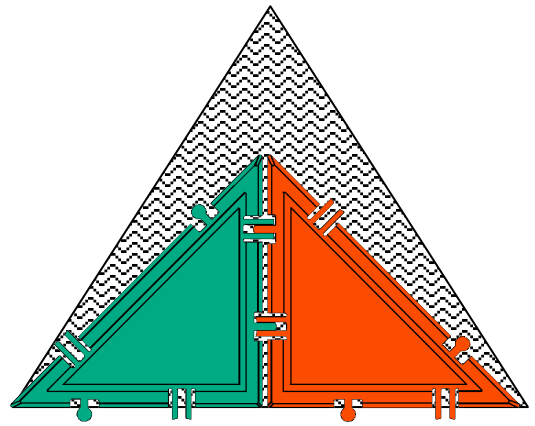

The rules are:

1. Any shapes that are next to each other must snap together.
2. The edges of the shape should be exactly on top of the edge of the shaded figure. They should not be inside the shaded figure or outside its border. See example below.
